### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 3 line 12, "...matching..." is amended to --match--

Claim 6 line 9, "...an..." is amended to --and--

Claim 6 line 13, "...matching..." is amended to --match--

Claim 12 line 9, "...or..." is amended to --of--

***Allowable Subject Matter***

1. Claim 1-14 are allowed.
2. Claims 1, 12 and 14 are the independent claims.

The following is an examiner's statement of reasons for allowance.

Claim 1 states a method for automatically equalizing microphone signals in a directional microphone system having at least three omnidirectional microphones, wherein said at least three omnidirectional microphones are electrically connected in respective pairs to form a first directional microphone of the first order and a second directional microphone of the first order, said method comprising the steps of: matching only respective amplitudes of respective microphone signals generated by said omnidirectional microphones to make the respective amplitudes of the respective microphone signals generated by said omnidirectional microphones substantially equal to each other; and matching only respective amplitudes of respective microphone signals generated by said first and second directional microphones of the first order by phase shifting the microphone signal generated by at least one of the omnidirectional microphones to make the respective amplitudes of the respective microphone signals generated by said first and second directional microphones substantially equal to each other.

The general concept of amplitude matching of microphones is well known in the art at the time of the invention as evidenced by Baekgaard (6272229), Baumhauer Jr (5515445), Thompson (6654468) and Hou (7155019). However, the Examiner has not found prior art that teaches only amplitude matching of microphones at each stage, of

Art Unit: 2615

the particular type and configuration disclosed in claim 1 and wherein the second stage microphone amplitude matching is dependent on the phases of the first stage.

The general concept of obtaining a directional microphone pattern from a combination of microphones is well known in the art at the time of the invention as evidenced by Bradley (5463694), Knapp (7324649), Ribic (7020290), Boone (6741713) and Warren (7065220).

However, the Examiner has not found prior art that teaches or suggests only amplitude matching of the particular microphones in the particular configuration disclosed, and amplitude matching of a second stage dependent on phases in a first stage.

Examiner has found prior art that teaches or suggests the combination of amplitude adjustment and the microphone configuration and type disclosed in claim 1, Knapp (7324649).

Examiner has not found prior art that teaches or suggests the combination of, only amplitude matching, the microphone type and configuration, and amplitude matching of a 2nd stage depending on phases in a first stage.

For at least the reasons listed above, the dependent claims are also allowed.

Independent claims 12 and 14 recite additional limitations.

Independent claims 12 and 14 are also allowed for the reasons listed above.

***Conclusion***
